

Lead Statuses and Lead Management Requirements for Gym Software

Executive Summary

This report assumes no specific region and no specific gym size. The synthesis therefore focuses on the cross-market patterns that appear repeatedly in official vendor documentation for major gym-management platforms and in publicly accessible user feedback. Across Mindbody, ABC Glofox, Zen Planner, ClubReady, GymMaster, and Vagaro, the most stable pattern is that lead management works best when it models a short, operationally clear journey: **new inquiry → human contact → intro or trial commitment → post-trial decision → won or lost**, with automation, reporting, and communications layered on top. Official materials from Mindbody, Glofox, GymMaster, Zen Planner, and ClubReady all center their lead tools around that journey, even when their exact terminology differs.

1

The single most important design decision is to keep the **status model small and event-driven**. A gym normally does not need a complicated B2B-style CRM pipeline. The highest-value statuses are the ones tied to a next action or a measurable conversion checkpoint: **New, Contacted, Qualified, Intro or Trial Booked, Trial Active, Post-Trial Follow-Up, Won, and Lost or Cold**. That recommendation is consistent with Mindbody's public pipeline examples, Glofox's Lead-Trial-Cold model, GymMaster's prospect-funnel examples, and ClubReady's lifecycle-driven lead-type automation.

2

The strongest demand signal in user feedback is not for exotic AI features first. It is for the basics to work reliably: **automatic follow-up, good reporting, multi-channel communication, usable integrations, frictionless trial booking, and a clean mobile/staff experience**. Public feedback points repeatedly to the same needs: social/email/SMS integration, central reporting, reliable notes and registration, more detailed reporting, class- or campaign-specific messaging, calendar sync, and mobile consistency. When those basics are weak, users complain about scattered settings, dated UI, poor mobile parity, or "rudimentary" reporting.

3

From a product strategy perspective, the best default for a gym lead-management section is therefore: **fast lead capture, immediate automated acknowledgment, clear ownership, short sales cadences, event-driven movement into trial states, channel-specific consent controls, and a reporting layer built around stage conversion, intro booking, show-up, and trial-to-member performance**. That architecture is the closest match to what official vendor product trails and user pain points both suggest.

4

Research Scope and Vendor Landscape

This review prioritizes official vendor materials first, then uses public user feedback to identify gaps, requests, and recurring frustrations. The official evidence base comes primarily from vendor product pages, help centers, support articles, product-update pages, and official PDFs for Mindbody, ABC Glofox, Zen Planner, ClubReady, GymMaster, and Vagaro. Public user feedback was drawn from accessible G2, Capterra, Reddit, Facebook-search-accessible posts, and app-store pages. Because many

Facebook-group discussions are login-gated and not fully crawlable, Facebook evidence is directional rather than comprehensive. ⁵

Vendor lead-status terminology

Vendor	Publicly documented terminology	What it implies for product design
Mindbody	Public guide imagery shows New Leads → Contact Made → Trial Started → Trial Completed → Won ; official product pages also describe a configurable pipeline and automatic movement into a Won column. ⁶	Mindbody treats lead management as a configurable funnel with fixed conversion milestones and optional automation.
ABC Glofox	Official help explicitly defines Lead, Trial, and Cold as lead statuses. ⁷	Glofox uses a deliberately small stage model, with “Cold” as an operator-controlled sink state.
Zen Planner	Official public materials describe movement from inquiry to enrollment , with leads “categorized by level of interest” and tracked throughout a funnel; public lead-scoring language also appears in official content. ⁸	Zen Planner’s public model is more CRM-like, blending stage progression with interest/engagement scoring.
ClubReady	Public materials use Prospect, Lead Type, and Member ; ClubReady’s guides state that lead type is lifecycle-driven and used to trigger tasks, and Connect can filter by custom lead type. ⁹	ClubReady appears to separate lifecycle stage from segmentation/type, which is useful for franchise and multi-location operations.
GymMaster	Official examples show a customizable Prospect Funnel with example stages such as Expressed Interest, Contacted by Staff, Tour and Assessment Booked, Post Tour Follow-Up, Signed Up, and Not Interested ; automation examples also reference Trial Membership and Tour Attended . ¹⁰	GymMaster’s model is the clearest example of a gym-specific state machine built around tours, trials, and sign-up.
Vagaro	Public docs do not expose a dedicated lead-status taxonomy. Vagaro instead documents Customer Profiles, General Tags , filtered email audiences, “lost customer” campaigns, and retention tracking. ¹¹	Vagaro supports segmentation and marketing well, but its public documentation points to a customer-list model rather than an explicit sales-pipeline model.

Vendor feature-support comparison

The table below compares only features that are publicly documented in official materials.

Vendor	Lead capture	Workflow automation	Multi-channel communication	Trial or intro booking	Reporting and conversion analytics	Segmentation or scoring
Mindbody	Yes. Official lead tools pull in new client profiles and tagged leads. ¹²	Yes. Automated follow-up tasks and rule-based movement are documented. ¹³	Yes. Email, text, and AI-assisted messaging are documented. ¹⁴	Partial but meaningful. Public materials reference scheduling appointments or visits and trial-stage workflows. ¹⁵	Yes. Funnel metrics, Analytics 2.0, and Won-column logic are documented. ¹³	Partial. Public guides show “likely/may/not likely to convert” labels; full public scoring documentation is limited. ¹⁶
ABC Glofox	Yes. Lead Capture Forms are official and can add leads directly to the dashboard. ¹⁸	Yes. Filters, traffic-light targeting, and conversion workflows are documented. ¹⁹	Yes. SMS, push, and message sending are documented. ²⁰	Yes. Lead forms can book classes; trial status updates automatically when a trial membership is taken. ²¹	Yes. Lead conversion reporting is detailed in support docs. ²²	Yes. Filters include bookings, attendances, last contact, lead source, lead status, and trial expiry; traffic lights add recency prioritization. ²³
Zen Planner	Yes. Official pages describe website lead capture, trial sign-ups, and inquiry handling. ²⁵	Yes. Drip email and SMS campaigns are documented in Engage. ²⁶	Yes. Official materials document email, SMS, omnichannel chat tools, and AI voice tools. ²⁷	Yes. Official materials mention booking free trials and appointment scheduling. ²⁸	Yes. Smart reporting and conversion tracking are documented. ²⁹	Yes. Official content explicitly references lead scoring and categorization by interest level. ³⁰
ClubReady	Yes. Prospects can be created and synced into the CRM. ³²	Yes. Automated lead nurturing, tasks, and reminders are core messaging points. ³³	Yes. SMS, MMS, shared inboxes, reminders, and AI call/text handling are documented. ³⁴	Yes. Official materials document paid or free intro-offer booking and AI-booked trial offers. ³⁵	Yes. Lead dashboards and advanced reporting are public product claims. ³⁶	Yes. Custom lead type filtering is documented. ³⁷

Vendor	Lead capture	Workflow automation	Multi-channel communication	Trial or intro booking	Reporting and conversion analytics	Segmentation or scoring
GymMaster	Yes. Prospect funnels organize all inquiries in one place. ³⁹	Yes. Stage-triggered tasks, email, SMS, and stage changes are documented in detail. ⁴⁰	Yes. Email and SMS automation are explicit. ⁴⁰	Yes. Tours, free assessments, and trial memberships are central to the official funnel examples. ⁴¹	Partial. Funnel reporting is less public than workflow docs, but GymSales integration adds CRM pipeline visibility. ⁴²	Partial. Stages are highly customizable, but public lead-scoring docs were not found. ⁴³
Vagaro	Partial. Vagaro supports profiles, forms, and campaigns, but public docs do not frame this as a dedicated gym lead module. ⁴⁴	Yes for marketing automations. Automatic campaign types are documented. ⁴⁵	Yes. Email and text campaigns are official. ⁴⁶	Partial. Booking and scheduling are core, but public lead-pipeline documentation is weak. ⁴⁷	Yes. Reporting, retention tracking, and customer-list filtering are official. ⁴⁸	Partial. Tags and filters are documented; lead scoring is not. ⁴⁹

Essential Lead Statuses and Default State Machine

The clearest cross-vendor lesson is that gyms should keep statuses tied to **observable milestones**, not vague internal opinions. Mindbody's public pipeline stages, Glofox's explicit statuses, and GymMaster's funnel examples all converge on a short list of stages that tell staff exactly what to do next. Zen Planner and ClubReady add segmentation and lead-type logic, but that works best as a **layer on top of** core statuses, not as a replacement for them. ⁵¹

Ranked essential statuses

Rank	Recommended standard status	Definition	Typical transitions	Why it is essential
Highest	New	A captured inquiry with no verified two-way interaction yet.	To Contacted , Qualified , or Lost/Cold if invalid or duplicate.	Every vendor starts with a fresh inquiry state, whether called New Lead, Lead, Expressed Interest, Prospect, or inquiry. ⁵²
Very high	Contacted	A lead with at least one meaningful human or automated response and an assigned next step.	From New ; to Qualified , Intro/Trial Booked , Nurture , or Lost/Cold .	Mindbody uses Contact Made; GymMaster uses Contacted by Staff; official materials emphasize fast staff follow-up. ⁵³
Very high	Qualified	The lead has confirmed intent, fit, and at least one plausible purchase path, even if no booking exists yet.	From Contacted ; to Intro/Trial Booked , Nurture , or Lost/Cold .	This is the cleanest place to separate serious prospects from passive inquiries; Zen Planner's "level of interest" and Mindbody's convert-likelihood cues point in this direction. ⁵⁴
Very high	Intro or Trial Booked	A tour, consultation, assessment, intro offer, or trial session has been scheduled.	From Qualified or Contacted ; to Trial Active , No-Show/Rebook , or Won if bought immediately.	Gym sales are unusually event-driven; booking the intro is one of the strongest intent signals in every official journey reviewed. ⁵⁵
High	Trial Active	The lead has started the trial, intro package, or equivalent evaluation experience.	From Intro/Trial Booked ; to Post-Trial Follow-Up , Won , or Lost/Cold .	Glofox uses Trial directly as a status; Mindbody and GymMaster both model trial activity as a core pipeline milestone. ⁵⁶
High	Post-Trial Follow-Up	The evaluation period has ended, or enough trial behavior exists to trigger a close decision.	From Trial Active ; to Won , Nurture , or Lost/Cold .	Mindbody's Trial Completed stage and GymMaster's Post Tour Follow-Up both show that gyms need a distinct "decision window" state. ⁵⁷

Rank	Recommended standard status	Definition	Typical transitions	Why it is essential
High	Won	The lead converted to a member, pack holder, or paying client.	From Qualified , Intro/Trial Booked , Trial Active , or Post-Trial Follow-Up .	All studied gym funnels need a terminal conversion state; Mindbody explicitly automates movement into Won. ⁵⁸
High	Lost or Cold	The lead is not converting now, has opted out, is not interested, or is operationally deprioritized.	From almost any pre-win active stage; optionally back to Nurture or Contacted if reactivated.	Glofox's Cold and GymMaster's Not Interested are clear examples of a terminal or semi-terminal inactive state. ⁵⁹

A gym may also want **auxiliary non-ranked states** such as **No-Show**, **Duplicate**, **Invalid**, and **Nurture/Recycled**. Those are useful, but they should normally be implemented as either secondary statuses, sub-statuses, or flags rather than as the main pipeline backbone. User feedback strongly suggests that over-complicated state models become hard to use, hard to train, and hard to report on. ⁶⁰

Recommended default workflow

The recommended default is a small, event-driven state machine. It matches the clearest vendor patterns while avoiding the extra complexity that users often criticize in older or patchwork systems. Official sources also support short response-time cadences: Mindbody's guide recommends a first contact within 24 hours, GymMaster's example triggers staff contact within 48 hours, and Glofox's traffic-light system visibly prioritizes recency of contact. ⁶¹

Operationally, the state machine should be paired with three default rules. First, **every New lead gets an automated acknowledgment immediately and a staff owner immediately**. Second, **every active non-terminal lead must always have one next action and one next-action due date**. Third, **only objective events should move leads automatically**: a booked intro, trial start, trial expiry, membership purchase, no-show, or opt-out. That approach matches how Mindbody, GymMaster, Glofox, and ClubReady publicly describe automation. ⁶²

Most Requested Lead Management Features

The frequency signal below is **directional**, not market-share-weighted. It comes from a manually coded sample of public user-feedback items available on July 6, 2026 across G2, Capterra, Reddit, public Facebook-search results, and app stores. The highest-frequency asks were not abstract “CRM” requests;

they were concrete requests for faster follow-up, better reporting, stronger messaging, better integrations, more reliable booking and registration flows, and cleaner mobile execution. ⁶³

Ranked feature list

Rank	Feature	Directional frequency	Why users ask for it	Examples of official vendor support
Highest	Automated follow-up, reminders, and task workflows	10	This is the strongest recurring need because lead leakage in gyms usually comes from missed follow-up, not lack of demand. Users and vendors alike focus on sequences, reminders, assigned tasks, and automation tied to lifecycle events. ⁶⁴	Mindbody supports automated follow-up tasks and configurable rules. Glofox supports targeted messaging and recency targeting. Zen Planner Engage supports drip email/SMS campaigns. ClubReady Connect and CRM automations schedule reminders and follow-ups. GymMaster supports stage-triggered email/SMS/tasks. Vagaro supports automatic campaign types. ⁶⁵

Rank	Feature	Directional frequency	Why users ask for it	Examples of official vendor support
Very high	Conversion reporting and funnel analytics	8	Operators repeatedly want better visibility into where leads stall, which sources convert, and how trials become members. Reporting weakness is one of the most common user complaints. ⁶⁶	Glofox documents lead-conversion reporting, trial-to-client metrics, and source/entry-point performance. Mindbody documents funnel metrics and Won logic. Zen Planner documents smart reporting and conversion tracking. ClubReady publicly emphasizes advanced reporting. Vagaro documents retention tracking and advanced reporting. ⁶⁷
Very high	Multi-channel communication	8	Gym operators do not want one more disconnected tool for phone, text, email, app messaging, or missed-call follow-up. Requests repeatedly mention SMS, email, socials, and phone in one workflow. ⁶⁸	Mindbody supports email, text, and AI messaging. Glofox supports SMS, push, and message sending. Zen Planner supports email, SMS, chat, and voice AI. ClubReady supports SMS/MMS and AI call/text workflows. Vagaro supports email and text campaigns. ⁶⁹
High	Lead capture from website, forms, kiosks, and ads	5	Without good capture, no downstream automation helps. Users also complain when registration or forms break. ⁷⁰	Glofox's lead-capture forms are especially explicit, including embedded flows and contact capture. Zen Planner documents embedded lead forms and inquiry capture. Mindbody documents tagged leads entering the pipeline. ClubReady documents lead import, prospect creation, and intro-offer capture. ⁷¹

Rank	Feature	Directional frequency	Why users ask for it	Examples of official vendor support
High	Trial or intro booking and reminder workflows	6	In gym operations, the intro or trial is the decisive step between interest and revenue. Public discussion also shows demand for syncing trial dates and calendar behavior. ⁷²	Glofox lead forms can include booking and trial-triggered status changes. GymMaster's funnel is organized around tours, assessments, and trial memberships. ClubReady supports intro-offer booking and AI-booked trials. Zen Planner documents free-trial booking and appointment scheduling. ⁷³
High	Integrations, API access, and data sync	6	Users repeatedly ask for social/email/SMS integration, trial-date sync, one-app experiences, and fewer CSV/manual steps. ⁷⁴	Mindbody documents Attentive lead sync. ClubReady documents CORE-to-Connect syncing and API-backed integrations. Glofox documents Mailchimp/Twilio sync. Vagaro's official G2 profile lists business integrations. GymMaster supports GymSales integration. ⁷⁵
Moderate	Segmentation, filters, tags, and lead scoring	5	Operators want to prioritize the right people, not merely store everyone in a list. This is often requested indirectly through asks for "better targeting," "level of interest," or more useful reports. ⁷⁶	Glofox supports filters by bookings, attendances, last contact, source, status, and trial expiry. Vagaro supports general tags and filtered audiences. Zen Planner public materials mention lead scoring. ClubReady supports custom lead types. Mindbody's public guide imagery shows likelihood-to-convert labels. ⁷⁷

Rank	Feature	Directional frequency	Why users ask for it	Examples of official vendor support
Moderate	Unified timeline, notes, and mobile staff workflows	6	Mobile and UI complaints are consistent: slow workflows, weak note handling, dated UI, missing calendar sync, and scattered settings. ⁷⁸	Mindbody documents single-timeline touchpoints and mobile business management. ClubReady records messages in profile notes. Vagaro documents notes, forms, files, and custom fields in profiles. Glofox Pro is positioned as an admin app. ⁷⁹
Moderate	Privacy, consent, and permissions controls	3	The request volume is lower than for reporting or automation, but this is strategically important because messaging, consent, and staff-access mistakes can create legal and trust problems. Public operator discussions explicitly mention permissions and security. ⁸⁰	Glofox is strongest in the public documentation reviewed, with channel-level consent, preference updates, and third-party unsubscribe synchronization. ²⁴

A notable secondary conclusion is that **lead scoring is requested and useful, but less mature across gym-native platforms than automation and reporting**. Zen Planner is the clearest official example of lead scoring; Mindbody's public material shows convert-likelihood cues; Glofox leans more on recency and behavior filters than on explicit scores. That suggests gyms should usually launch with **segmentation and behavior triggers first**, then add formal scoring only when the team already uses the basics consistently. ⁸¹

Recommended UI and Lead Record Design

Public vendor patterns and user complaints point to one consistent UX lesson: the lead section should minimize context-switching. Users complain about dated or patchwork interfaces, scattered settings, weak notes, poor mobile parity, and missing calendar conveniences. Official vendor design patterns that work better are the ones that keep pipeline, profile, tasks, and communication history close together: Mindbody's customizable dashboard and timeline, Glofox's filter-driven leads tab, ClubReady's lead-type messaging context, GymMaster's stage/task model, and Vagaro's profile with notes, forms, files, and retention data. ⁸²

Recommended UI elements

UI element	Recommendation	Why it matters
Dual pipeline views	Offer both Kanban and list/table views.	Kanban is best for stage movement; list view is better for bulk work, reporting, and filtering. Mindbody and GymMaster both imply stage-oriented work; Glofox emphasizes filtering and targeted actions. ⁸³
Lead card with action summary	Every lead card should show status, owner, source, last touch, next task, trial state, and consent badges .	This keeps the pipeline operational rather than decorative. Glofox's reliance on last contact and trial expiry, plus GymMaster's task-driven funnel, argue for surfacing those metrics directly. ⁸⁴
Single activity timeline	Show messages, calls, notes, bookings, visits, forms, purchases, and status changes in one time-ordered feed.	Mindbody explicitly highlights a single timeline, and users criticize scattered workflows when data is spread across pages. ⁸⁵
Quick actions	Put call, SMS, email, book intro, mark no-show, mark won, snooze, and add note at the top of the profile.	Staff throughput matters more than feature count. ClubReady, Glofox, and GymMaster all emphasize actionability inside workflow. ⁸⁶
Smart queue	Add a queue such as Needs response, Follow-up due today, Trial ending soon, No-show recovery, Reactivation .	This turns the CRM from a database into a work queue, matching the task-first design of GymMaster and ClubReady. ⁸⁷
Bulk operations with guardrails	Allow bulk reassignment, tagging, cadence enrollment, and exports, with audit logs.	Mindbody's 2026 update added bulk lead reassignment, showing real operational demand. ¹⁷
Mobile parity	Staff-mobile workflows should support search, notes, contact, booking, and status changes without reducing visibility.	App-store feedback shows that weak mobile parity quickly becomes an operational complaint. ⁸⁸

Recommended lead-record fields

The right lead record is not just “contact info plus notes.” Official documents suggest a richer, gym-specific record centered on **channel, source, attendance behavior, trial milestones, and next action**. Glofox in particular documents fields and filters such as bookings, attendances, last contact, lead source, date created, trial expiry, and where the lead heard about the studio. ClubReady exposes lead type, referral type, contact method, and entry time. Vagaro supports notes, forms, files, custom fields, and retention data. ⁸⁹

Field group	Fields that should be default
Identity	Full name, phone, email, preferred language, timezone, home location
Acquisition	Lead source, campaign, ad or landing page, referral source, entry point, date created, assigned staff owner
Sales state	Status, sub-status, stage-entered timestamp, lead temperature or score, last contact timestamp, next-task due timestamp
Intent and fit	Goal or program interest, preferred membership option, desired start date, class type interest, training level, stated objections
Booking and trial	Intro booked date, intro attended date, no-show count, trial start date, trial end date, attendances during trial, trial expiry date
Relationship history	Notes, communication timeline, tasks, email opens or replies if available, SMS replies, call outcomes, visit history
Compliance	Email consent, SMS consent, push consent, consent source, consent timestamp, unsubscribe status, do-not-contact flag
Data hygiene	Duplicate flag, merge history, archived reason, lost reason, reactivation date

A practical product rule is that **only a small subset should be mandatory at creation**: first name, one contact method, source, location, and owner. Everything else should be progressively completed through workflow or automation. That keeps lead capture fast while still supporting rich reporting later. Official lead-capture examples from Glofox and Zen Planner both suggest progressive collection rather than front-loading every field. ⁹⁰

Privacy, Implementation, and KPIs

Privacy and consent considerations

Because no region is specified, the safest default is a **strict, channel-specific consent design**. Glofox's own consent documentation is a useful gym-software benchmark: it separates email and SMS opt-in, allows preference updates, distinguishes some transactional communications from marketing, syncs unsubscribes with third parties, and restricts who can opt a customer back in. Glofox also warns that additional SMS terms may be required in some markets. ²⁴

That default is consistent with major official regulators. The UK ICO states that marketing emails and texts to individuals generally require specific consent, subject to limited exceptions, and organizations should respect objections, opt-outs, and withdrawals of consent. The U.S. FCC states that TCPA consent matters for certain robocalls and robotexts, that revocation must be possible by reasonable means, and that the one-to-one consent rule applies to a single seller at a time for marketing messages. The FTC's CAN-SPAM guidance requires commercial email compliance, including honoring stop requests. Canada's CASL requires consent before sending commercial electronic messages, including texts, and Australia's OAIC states that direct-marketing emails and SMS must comply with the Spam Act's consent, identification, and unsubscribe requirements. ⁹¹

For product design, that means a gym lead section should support at least these controls by default: **separate checkboxes for email and SMS marketing, a stored consent source and timestamp, a visible preference center, automatic STOP/unsubscribe propagation where possible, role-based**

permissions for staff access, audit logs for status and consent changes, and a clear distinction between transactional messages and marketing campaigns. For multi-location gyms, role-based location restrictions and centralized but permission-aware reporting are especially important, and this also surfaced directly in public operator discussions. ⁹²

Implementation considerations

Implementation should begin with workflow discipline before advanced AI. The most successful official designs are the ones that tie automations to real events: new inquiry, first contact, intro booked, intro attended, trial started, trial ending, and membership purchase. GymMaster’s stage triggers and ClubReady’s lead-type/task model are good examples of that pattern. Mindbody and Glofox also emphasize rule-based progression and nurture rather than manual spreadsheet chasing. ⁹³

A practical rollout order is: **capture → ownership → first-response automation → booking workflow → trial workflow → reporting → segmentation/scoring.** That order matches the maturity curve visible in both vendor materials and user complaints. Teams that skip straight to sophisticated scoring or AI while registration, notes, reporting, or mobile execution are still weak usually create more complexity than value. ⁹⁴

KPIs to track

The most important KPIs are the ones closest to pipeline reality. Glofox’s documented conversion report already points to the right family of measures: number of leads, converted clients, conversion rate, lead-to-trial, lead-to-trial-to-client, and source and entry-point performance. Mindbody emphasizes funnel metrics that adapt workflow and performance. Zen Planner foregrounds smart reporting and conversion tracking. ⁹⁵

KPI	Why it matters
Speed to first response	The fitness sales motion is time-sensitive; this is the first operational health metric. ⁵⁷
Contact rate	Measures whether captured inquiries are actually being worked.
Qualified rate	Distinguishes good acquisition from low-intent noise.
Intro/trial booking rate	The strongest mid-funnel gym-specific intent metric. ⁹⁶
Intro/trial show rate	Separates booking friction from attendance friction.
Trial-to-member conversion rate	One of the most important revenue KPIs for gyms. ⁹⁷
Lead-to-member conversion rate	The top-line measure of sales-funnel effectiveness. ⁹⁸
Stage aging	Shows whether leads are being stalled instead of progressed.
Source conversion rate	Tells you which channels produce actual members, not just forms. ⁹⁷
Reactivation rate from Lost/Cold	Useful when running nurture or win-back sequences.

KPI	Why it matters
Opt-out rate by channel	A leading indicator of over-messaging or poor consent handling.
Duplicate/invalid lead rate	A measure of capture quality and integration quality.

If a gym has to choose only a few KPIs at launch, the best starter set is: **speed to first response, intro booked rate, show rate, trial-to-member rate, overall lead-to-member rate, and source conversion rate**. Those six metrics are usually enough to diagnose most funnel problems without overwhelming staff. ⁹⁹

Open Questions and Limitations

This report is strongest on official vendor documentation and on public web feedback that is accessible without login. Two limitations matter. First, several vendor help centers expose deeper detail only behind support pages, embedded apps, or PDFs that are not fully crawl-friendly, so some vendor comparisons—especially for Mindbody and ClubReady default status vocabularies—should be read as **publicly documented terminology**, not an exhaustive description of every in-product configuration. Second, Facebook-group evidence is underrepresented because much relevant discussion is login-gated or only partially visible to search. The feature-frequency chart should therefore be treated as a **directional public-signal summary**, not a complete census of gym-operator demand. ¹⁰⁰
